**DETAILED ACTION**

***Response to Arguments***

1. Applicant's arguments, see Applicant's remarks pages 12-17, with respect to claims 1-24 have been fully considered and are persuasive. The rejection of these claims has been withdrawn.

***Allowable Subject Matter***

2. Claims 1-24 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter: Claims 1, 13 and 24 of the current application teaches similar subject matter as the prior art of Lin US 5812286. However, claims 1, 13 and 24 are allowed for the following reasons.
4. Regarding claims 1 and 13, prior art of record fails to teach computing the lowermost and uppermost color levels for each of the color channels that are consistent with the overall distribution of color levels for that channel; computing the per channel average color level for a group of the brightest pixels; comparing the color levels of the G and R color channel pair and the G and B color channel pair to determine if the color levels in each compared pair is balanced; and whenever the color levels of either compared color channel pair are determined not to be balanced, linearly expanding the

Art Unit: 2625

dynamic range of the color channel with the narrower range to match the channel with the wider dynamic range to a desired degree for each of said channel pairs found to be out of balance.

5. Regarding claim 24, prior art of record fails to teach the sum of the number of pixels exhibiting a level within a prescribed range of levels extending from the lowest level possible to the unknown lowermost level, less one level, is less than the total number of pixels in the image multiplied by a tolerance factor designed to eliminate the impact of noise on the pixels color values, and the sum of the number of pixels exhibiting a level within a prescribed range of levels extending from lowest level possible to the unknown lowermost level, is greater than or equal to the total number of pixels in the image multiplied by the tolerance factor, and computing the uppermost level as the level wherein, the sum of the number of pixels exhibiting a level within a prescribed range of levels extending from the unknown uppermost level to the highest level possible, is greater than or equal to the total number of pixels in the image multiplied by said tolerance factor, and the sum of the number of pixels exhibiting a level within a prescribed range of levels extending from the unknown uppermost level, plus one level, to the highest level possible, is less than the total number of pixels in the image multiplied by the tolerance factor.
6. It follows that dependent claims 2-12 and 14-23 are inherently allowable for depending on an allowable base claim.
